## BC OIL AND GAS RESEARCH AND INNOVATION SOCIETY BOREAL CARIBOU TELEMETRY PROGRAM

### FIXED-WING TELEMETRY MONITORING FLIGHT – May 22-23, 2015

**Date:** May 31, 2015

**Attention:** Brian Thomson  
BC Oil and Gas Research and Innovation Society  
Victoria, BC

#### *Executive Summary*

One hundred fifty-five boreal caribou collar frequencies and 27 wolf collar frequencies were scanned during a monthly fixed-wing telemetry monitoring flight conducted on May 22-23, 2015. One hundred forty-six caribou collars were heard transmitting normal VHF signals and 1 was transmitting a mortality signal indicating a dead animal (SCEK110B). The remaining 8 caribou collars were not detected. These included 1 believed to have failed and 2 whose GPS data subsequently indicated they had moved outside the study area. No wolf mortality signals were detected.

#### *Background*

Between December 17, 2012 and April 01, 2015, 224 adult boreal caribou were radio-collared in British Columbia's boreal caribou ranges as part of the *British Columbia Boreal Caribou Implementation Plan* (BCIP). On May 22-23, 2015, Diversified Environmental Services (DES) conducted a fixed-wing monitoring flight under contract to the BC Oil and Gas Research and Innovation Society (OGRIS; formerly the *Science and Community Environmental Knowledge Fund* (SCEK)) on behalf of the Research and Effectiveness Monitoring Board (REMB). Fixed-wing monitoring flights are conducted at monthly intervals throughout the year in order to identify mortality events to be followed up by ground-based mortality investigations and collar recoveries, as well as to track potential long distance seasonal movements of VHF-collared caribou.

#### *Objectives*

The objective of the May 2015 monitoring flight was to determine the approximate location and VHF beacon status of all boreal caribou and wolf collars believed to be active in the survey area. These included caribou and wolf collars deployed on behalf of SCEK, caribou collars deployed on behalf of the Ministry of Forests, Lands, and Natural Resource Operations (MFLNRO), wolf collars deployed for a research program funded by Nexen Inc., and pre-existing collars known to have entered BC's boreal caribou ranges from adjacent jurisdictions.

#### *Methods*

The monitoring flight was conducted using a Cessna 180 fixed-wing aircraft equipped with 1 outward-facing directional antenna affixed to each wing strut. Collar frequencies were scanned using Lotek™ STR 1000 and Lotek BioTracker telemetry receivers. The flight was conducted at 700-1,000 m above ground level at an average speed of 160 km/hr. The VHF beacon status of all detected collars was recorded on hard copy forms. In the case of VHF collars (Lotek LMRT4), status was recorded as either normal (60 pulses per minute (ppm)) or mortality mode (120 ppm) and a location (+/- 1 km) was recorded using a hand-held GPS unit. In the case of GPS/satellite collars (ATS Iridium, Vectronic Vertex, and

Lotek LifeCycle), additional diagnostic VHF beacon patterns were recorded where applicable. As GPS/satellite collars are programmed to log multiple daily locations with high precision, additional effort to obtain collar locations after VHF signal detection is not necessary. Therefore, waypoints for GPS/satellite collars were typically recorded at the location from which the collar was heard, with corrections for estimated bearing and distance, unless the VHF beacon status indicated a collar malfunction or mortality, in which case, more precise locations were obtained.

### *Results*

One hundred fifty-five caribou collar frequencies were scanned during the May 2015 monitoring flight, including 150 SCEK collars (5 ATS Iridium, 61 Vectronic Vertex, 12 Lotek LifeCycle, and 72 Lotek VHF), 3 previously-deployed MFLNRO VHF collars, and 2 Alberta VHF collars. In addition, 27 wolf collar frequencies were scanned during the May flight, including 20 SCEK wolf collars (12 Lotek Iridium, 1 Vectronic Vertex, and 7 Lotek VHF), and 7 Nexen collars (Lotek Iridium). Several SCEK Iridium wolf collars assumed to have exceeded their battery lives were not scanned.

Results of the May 22-23, 2015 monitoring flight are presented in Table 1. Flight paths searched within and adjacent to each core habitat area are shown in Figure 1. Total flight line distance was 3,412 km. Of 155 caribou collar frequencies scanned, 146 normal VHF signals and 1 mortality signal were detected (North Kotcho Lotek GPS SCEK110B). The VHF signals of the remaining 8 caribou collars were not detected. These include 1 SCEK ATS Iridium collar that has ceased Iridium data transmission and is believed to have failed (SCEK184), 2 SCEK GPS collars whose GPS data transmissions indicated they were well outside the study area at the time of the flight (SCEK014B, SCEK179), one SCEK GPS collar whose transmitted GPS data indicated normal activity within the search area (SCEK216), and 4 VHF collars (BC1009, SCEK030, SCEK060, SCEK145).

Twenty-seven wolf collar frequencies were scanned during the May 2015 monitoring flight, including 20 Lotek and Vectronic GPS/satellite collars and 7 Lotek VHF collars. No mortalities were detected. Of the 20 GPS/satellite wolf collars scanned, 8 normal VHF signals were heard, 9 were not detected but were transmitting GPS data indicating normal activity, and 3 are believed to have failed.

Of the 7 VHF wolf collars scanned, 4 had normal VHF signals, a fifth is assumed to have failed or the wolf dispersed soon after deployment in 2013 (BW007, Snake Pack), and the remaining 2 are assumed operational but were not detected (BW002, Big Arrow Pack; BW026, Kwokullie Pack).

There were no opportunities for First Nations field assistance on this monitoring flight.

Cordially,

Brad Culling, R.P.Bio  
Diversified Environmental Services  
Fort St. John, BC
