BC OIL AND GAS RESEARCH AND INNOVATION SOCIETY BOREAL CARIBOU TELEMETRY PROGRAM

FIXED-WING TELEMETRY MONITORING FLIGHT – June 16-18, 2015

Date: Jun 30, 2015

Attention: Brian Thomson
BC Oil and Gas Research and Innovation Society
Victoria, BC

Executive Summary

One hundred fifty-four boreal caribou collar frequencies and 27 wolf collar frequencies were scanned during a monthly fixed-wing telemetry monitoring flight conducted on June 16-18, 2015. One hundred forty-two caribou collars were heard transmitting normal VHF signals and 3 were transmitting mortality signals indicating dead animals (SCEK144, SCEK210, and AB150.470). The remaining 9 caribou collars were not detected. These include 2 believed to have failed, 2 whose GPS data indicated they are alive but have moved well outside the study area, and one whose GPS beacon may have failed but whose GPS data indicates normal activity within the study area. No wolf mortality signals were detected.

Background

Between December 17, 2012 and April 01, 2015, 224 adult boreal caribou were radio-collared in British Columbia's boreal caribou ranges as part of the *British Columbia Boreal Caribou Implementation Plan* (BCIP). On June 16-18, 2015, Diversified Environmental Services (DES) conducted a fixed-wing monitoring flight under contract to the BC Oil and Gas Research and Innovation Society (OGRIS; formerly the *Science and Community Environmental Knowledge Fund* (SCEK)) on behalf of the Research and Effectiveness Monitoring Board (REMB). Fixed-wing monitoring flights are conducted at monthly intervals throughout the year in order to identify mortality events to be followed up by ground-based mortality investigations and collar recoveries, as well as to track potential long distance seasonal movements of VHF-collared caribou.

Objectives

The objective of the June 2015 monitoring flight was to determine the approximate location and VHF beacon status of all boreal caribou and wolf collars believed to be active in the survey area. These included caribou and wolf collars deployed on behalf of SCEK, caribou collars deployed on behalf of the Ministry of Forests, Lands, and Natural Resource Operations (MFLNRO), wolf collars deployed for a research program funded by Nexen Inc., and pre-existing collars known to have entered BC's boreal caribou ranges from adjacent jurisdictions.

Methods

The monitoring flight was conducted using a Cessna 180 fixed-wing aircraft equipped with 1 outward-facing directional antenna affixed to each wing strut. Collar frequencies were scanned using Lotek™ STR 1000 and Lotek BioTracker telemetry receivers. The flight was conducted at 700-1,000 m above ground level at an average speed of 160 km/hr. The VHF beacon status of all detected collars was recorded on hard copy forms. In the case of VHF collars (Lotek LMRT4), status was recorded as either normal (60 pulses per minute (ppm)) or mortality mode (120 ppm), and a location (+/- 1 km) was

recorded using a hand-held GPS unit. In the case of GPS/satellite collars (ATS Iridium, Vectronic Vertex, and Lotek LifeCycle), additional diagnostic VHF beacon patterns were recorded where applicable. As GPS/satellite collars are programmed to log multiple daily locations with high precision, additional effort to obtain collar locations after VHF signal detection is not necessary. Therefore, waypoints for GPS/satellite collars were typically recorded at the location from which the collar was heard, with corrections for estimated bearing and distance, unless the VHF beacon status indicated a collar malfunction or mortality, in which case, more precise locations were obtained.

Results

One hundred fifty-four caribou collar frequencies were scanned during the June 2015 monitoring flight, including 149 SCEK collars (5 ATS Iridium, 61 Vectronic Vertex, 11 Lotek LifeCycle, and 72 Lotek VHF), 3 previously-deployed MFLNRO VHF collars, and 2 Alberta VHF collars. In addition, 27 wolf collar frequencies were scanned during the June flight, including 20 SCEK wolf collars (12 Lotek Iridium, 1 Vectronic Vertex, and 7 Lotek VHF), and 7 Nexen collars (Lotek Iridium). Several SCEK Iridium wolf collars assumed to have exceeded their battery lives were not scanned.

Results of the June 16-18, 2015 monitoring flight are presented in Table 1. Flight paths searched within and adjacent to each core habitat area are shown in Figure 1. Total flight line distance was 3,445 km. Of 154 caribou collar frequencies scanned, 142 normal VHF signals and 3 mortality signal were detected (Prophet VHF SCEK144, Kiwigana Vectronic GPS SCEK210, and Alberta VHF AB150.470). The VHF beacons of the remaining 9 caribou collars were not detected. These include 1 SCEK ATS Iridium collar that has ceased Iridium data transmission and is believed to have failed (SCEK184), 2 SCEK GPS collars whose GPS data transmissions indicated they were alive but well outside the study area at the time of the flight (SCEK014B, SCEK179), 1 SCEK GPS collar whose VHF beacon may have failed but whose GPS data transmissions indicate normal activity within the search area (SCEK216), 1 MFLNRO collar whose battery may have expired after 7 years of activity (BC1009), 1 Alberta VHF collar that may have failed or the caribou returned to Alberta, and 3 SCEK VHF collars that are assumed active but were not detected during the June flight (SCEK030, SCEK096, SCEK105).

Twenty-seven wolf collar frequencies were scanned during the June 2015 monitoring flight, including 20 Lotek and Vectronic GPS/satellite collars and 7 Lotek VHF collars. No mortalities were detected. Of the 20 GPS/satellite wolf collars scanned, 13 normal VHF signals were heard, 4 were not detected but were transmitting GPS data indicating normal activity, and 3 are believed to have failed.

Of the 7 VHF wolf collars scanned, 5 had normal VHF signals, a fifth is assumed to have failed or the wolf dispersed soon after deployment in 2013 (BW007, Snake Pack), and the remaining collar is assumed operational but was not detected (BW026, Kwokullie Pack).

There were no opportunities for First Nations field assistance on this monitoring flight.

Cordially,

Brad Culling, R.P.Bio
Diversified Environmental Services
Fort St. John, BC
