Project Name:	North East BC Seismic Array Network
Project Number:	ER-Seismic-2021-01 (continued from EI-2016-06)
Proponent:	BC Seismic Research Consortium
BC OGRIS Funding Envelope:	Environmental ResearchSeismicity
Timeframe:	October 1, 2020, to September 30, 2023

## **Project objectives**

The objectives of this project are to maintain a state-of-the-art seismic array network and collect and analyze data on seismic activity in North East BC.

## **Project description**

The project is a multi-year phased collaborative initiative between the BC Energy Regulator (formerly the BC Oil and Gas Commission), the Canadian Association of Petroleum Producers, Geoscience BC, and the BC Oil and Gas Research and Innovation Society (BC OGRIS). The project is led by Geoscience BC and jointly funded by Geoscience BC and BC OGRIS. The consortium includes the following governance structure:

- Steering Committee—providing operational direction to achieve the project's objectives. The Steering Committee comprises representatives of the project partners; and
- Technical Committee—providing advice to the Steering Committee on technical matters. The Technical Committee comprises representatives of federal and provincial governments, industry and academic institutions.

The project was initially established with a five year timeframe from July 1, 2012 to June 30, 2017. On July 1, 2017 the project was extended to September 30, 2020 upon agreement by all Consortium partners. In October, 2020, the agreement was extended for a further three years until September 30, 2023.

## **Project background**

Over the past several years, geologists have been evaluating whether natural gas development may result in seismic activity. Government, industry, communities and First Nations have a common interest in learning more about this issue to support the responsible development of natural gas resources in BC.

# **Project approach**

BC OGF

The project is a multi-phased project covering a 12-year timeframe.

Phase 1 activities covered the initial installation and testing of the six seismometers comprising the network. This phase took place between July 1, 2012 and March 31, 2013.

The network is now fully integrated into the Canadian National Seismic Network (CNSN) and provides real-time data to the Geological Survey of Canada's earthquake location operation. The results from analysis are posted on the Earthquakes Canada website: http://www.earthquakescanada.nrcan.gc.ca/stndon/index-en.php.

Subsequent phases cover the maintenance of the network and the interpretation of the data. A dedicated seismologist has been engaged to undertake real-time analysis of events within the project area, recommend improvements to the enhanced network and perform project-specific research.

### **Project deliverables**

The deliverables from this project include the following:

- 1. Network of seismometers in Northeast BC;
- 2. Information from the Network available on the Natural Resources Canada website; and
- 3. Annual report on seismic activity in North East BC.
